

# backup:LINK ENTERPRISE

Telecommunication services for your business

- an advanced tool to prevent data loss
- backup and replication in a single solution
- fast, flexible and reliable data backup

## Protect what's most valuable – your data

The lack of a quality data backup exposes you to the high risk that an unexpected outage or malfunction could cost you many times more than the price of a quality backup solution.

**backup:LINK ENTERPRISE** uses professional grade Veeam solutions and facilitates reliable backup and restoration of individual files, applications and entire-virtual servers in a matter of minutes.

## Providing you with continuous backup

Technological advancements, deduplication and compression allow you to back up your environment with minimal delay, thanks to which your backup is almost continuous. The most you'll lose in a crash are a few minutes of your work.

The product itself verifies the consistency of backups, giving you the certainty that your data was backed up in a functional condition.

## Infrastructure outages won't stop you

**backup:LINK ENTERPRISE** also offers a **Disaster Recovery** feature in addition to standard backup. It allows you to continuously replicate virtual servers from your own cloud to a Slovanet cloud solution. Even if an outage impacts your primary servers, you'll retain the ability to start all systems smoothly using secondary infrastructure without the wait for the data to be recovered from the backup.

## Advantages

- data backup system from Veeam, the global leader in ensuring availability
- RTO and RPO in less than 15 minutes for all applications and data
- an effective tool to support the 3-2-1 principle (min. 3 backups on 2 different media, 1x off-site)
- disaster recovery - ability to replicate virtual servers on secondary infrastructure, without complicated configurations and VPN connections
- SSL encrypted transfer and AES-256 backup data encryption
- integrated WAN acceleration (up to 50x faster than regular file copying)
- ability to back up from storage snapshots with minimal load on the running environment
- no need to deploy agents to every virtual installation (applies when using the **cloud:LINK** or own cloud solution)

Telecommunication services for your business

## An extra overview of your infrastructure

Customers using the virtual datacenter **cloud:LINK** can benefit from additional cost-effective option of **backup:LINK ENTERPRISE** to acquire in-depth intelligent monitoring for their entire virtual infrastructure. Continuous monitoring provides you with several advantages:

- real-time overview of the status and load of your virtual servers,
- simplified creation of reports and forecasts of used computing capacities,
- proactive warnings and notification of potential problems before they negatively impact the operation of your systems.

## Backup physical servers and PCs

Backing up data is important for more than virtual environments. Thanks to **backup:LINK ENTERPRISE**, you can easily back up and recover physical servers and workstations running Windows or Linux operating systems.
