# ethernet:GATE

Telecommunication services for your business

- a less expensive and more flexible alternative to expensive digital circuits
- competitively priced, efficient and flexible conditions
- simple network connection solution for telecommunications services operators

Professional solution for the best

ethernet:GATE is specifically for telecommunications service operators including internet service providers, alternative voice service operators and more. You can combine this service with other offers from our broad range of data and voice services intended for your business.

ethernet:GATE delivers a 2nd layer ISO-OSI model connection for your Ethernet networks. This connection enables the operation of demanding applications such as data centres, video solutions and transparent connections to peering centres. **ethernet:GATE** delivers a circuit with significant operating cost savings.

ethernet:GATE provides you with the following advantages

- a less expensive alternative to rented circuits (SDH) with lower costs
- flexible capacity with the most commonly used interfaces
- Point-to-Point or Point-to-Multipoint topology
- transparent solutions
- standardized ethernet technology
- a wide range of last-mile technology
- guaranteed SLA
- 24/7 customer service

All of this can take place using metro infrastructure or within national or international solutions where clients may need a flexible Ethernet interface comparable with a circuit connection instead of classic IP VPN networks. **ethernet:GATE** is not based on IP routing.
