

server:LINK

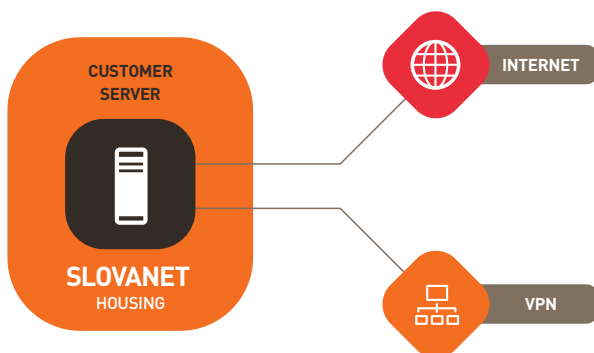

Telecommunication services for your business

- safely stored computing resources
- permanent availability monitoring
- scalability and redundancy of the whole solution

High data transfer speed without loading your line

Reliable computing resources are necessary for companies working with IT systems and developing their activities via the Internet. Installing a server in own premises is becoming too demanding in terms of data connection capacity, equipment of premises and security. The **server:LINK** service relieves you of the trouble of its installation, and provides all conditions for trouble-free and reliable operation.

Parameters

- the size of the rented space: rack/half-size rack/1 place in a rack (so-called 1 unit)
- connection speed: 10 Mbit/s, 100 Mbit/s, 1 Gbit/s

Benefits of the service

- saving costs related to building up own premises
- high connection speed within Slovakia and abroad
- unlimited volume of transferred data
- permanent availability of services (double backup of the connection to the backbone network based on optical infrastructure, uninterruptible power supply)
- permanent availability of premises, the option to perform a remote-controlled restart 24/7
- tailored services (from 1 server up to the whole rack, from 10 Mbit/s up to 1 Gbit/s)
- wide range of related and additional services (DNS and mailserver backup, domain registration and administration, allocation of IP addresses, on-line monthly overview of the service use, server administration, etc.)

Secured premises

- 24/7 entry into the technological room only allowed to authorised persons on the basis of their identity verification
- locked premises and distributors, CCTV, non-stop security service
- electronic security system
- 24/7 supervision of the Network Monitoring Centre
- constant room temperature in the data centre
- redundant air-conditioning units
- protection against humidity changes, dust-free environment, fire protection
