Voice:GATE

Telecommunication services for your business

- modern low cost calling with no need to worry about operations
- IP branch exchange with diverse functions
- variable applications and adaptive solutions

Modern voice services - convenience and efficiency

Be sure to focus proper attention on the voice services you offer your customers! Demand quality at a modern price. The **voice:GATE** solution is a complete solution for internal and external voice communications. We'll provide you with access to an IP branch exchange with a range of useful functions without any investment costs. You will receive complete care, maintenance and administration of the system delivered by our professionals at a price adapted to the scale of the solution. Inexpensive calling using VoIP technology saves your customers money on their telecommunications costs as well.

Savings and flexibility

- no need to invest in the purchase of your own branch exchange or to upgrade your current exchange
- no need to own expensive terminal equipment as the solution is completely scalable as your customer base grows
- Cheaper calling to fixed line and mobile networks (local and long-distance calling starting at €0.06 excl. VAT per minute)
- free Internet calls in your network and in our network
- calling between network users completely free, 24 hours a day
- discounts for calls to all international networks
- eall charges are rounded to the second

Work more efficiently

- ability to use Internet and data services (connection of customer branches, VPN, etc.)
- adaptable to the needs of your company easy to add and remove users
- ability to leave your current phone number or choose a new number
- free of charge overview of calls and easy control over telecommunications costs
- modern accessory services (CLIP, call routing, register of received / missed calls)
- operation, administration and system supervision secured by our professionals 24 / 7 / 365
- we quickly handle all branch exchange issues at our cost throughout the period of service operation

Technical solutions:

Solution flexibility

We will configure the service to fully meet the needs of your customers. If they own analogue telephones we will provide you with a solution that allows them to make VoIP calls using a branch exchange. If communication demands are higher, we will propose a complete solution with a dedicated exchange.

The deployment of IP telephones and software telephones represents a more modern and progressive solution. This delivers customers with a range of comfortable accessory services, many of which are known from mobile phones. They will certainly enjoy the ability to forward calls, CLIP/CLIR, answering service, connecting calls and other accessory services.

Finally, as your customer base grows, we are able to secure a combined solution including analogue and IP telephones and data services.

Options for using VoIP telephony

- **classic analogue telephones** can be easily used as an IP telephone with a simple converter
- **IP telephones** a modern type of telephone with a range of additional functions that is used independent of a computer
- **Software telephone** a software application enabling calls to be completed directly from a computer of smartphone
