

voice:LINK

Telecommunication services for your business

- a modern comfortable way of making phone calls at lower prices
- IP PBX with various functions
- variable use and adjustable solution

Modern voice services - comfort and efficiency

Focus your attention to voice services. Require state-of-the-art quality and price. The **voice:LINK** service is the comprehensive solution for in-company and external voice communication. It enables you to use the IP PBX with a range of useful functions at no investment costs. For a price adjusted to the scope of solution, you will get complete care, maintenance and administration of the system provided by our experts. What's more, advantageous phone calls using VoIP technology save your telecommunication costs.

Cost saving and flexibility

- no investments in the purchase of own PBX or innovation of your current one
- no need to own expensive terminal devices, the size of the solution is parallel to your company`s growth
- cheaper calls to landlines and mobile phones (local and long-distance calls from 0.06 € excl. VAT/min.)
- in-company calls free of charge
- calls between users of the Slovanet network completely free of charge 24 hours a day
- discounts for calling to all foreign networks
- tariff rates per second
- say good-bye to standard telephone line with expensive flat rate

More efficient work

- the opportunity to use both the Internet and data services (interconnection of branch offices, VPN, etc.)
- adjusting to your company`s needs with the simple addition and removal of users
- option to retain your current phone number or choose a new one
- overview of calls free of charge and control of your telecommunication costs
- up-to-date additional services (CLIP, call forwarding, register of taken/missed calls)
- operation, administration and supervision of the system provided by our experts 24/7/365
- quick troubleshooting of the PBX at our cost throughout the period of service operation

Telecommunication services for your business

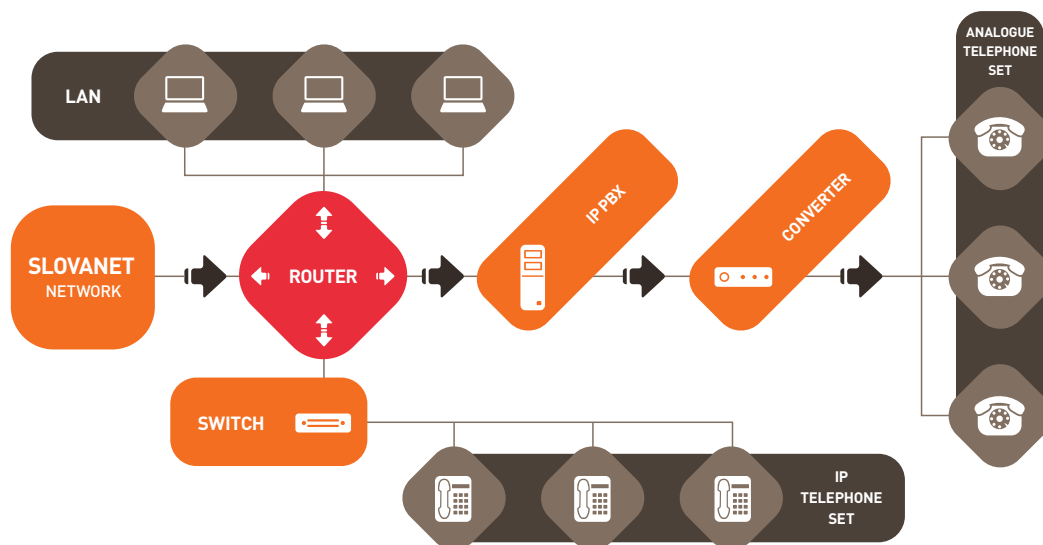

Solution flexibility

We will set up the service in a way that is fully adjusted to your company's requirements. If you own analogue phone sets we will give you a solution that enables calls using VoIP and a PBX. Should you have higher communication demands, you can also use the access line for data and voice sharing.

A more modern and progressive solution is the use of IP phones and software phones. You thus get a number of useful additional functions found in mobile phones - call forwarding, CLIP/CLIR, voicemail, call interconnections and other supplementary services.

We can offer this solution with data services as well. And lastly, while your business grows we can also provide a combined solution of analogue phones, IP phones and data services (please see diagram).

An example of use and connection:

For VoIP telephony, you can use:

- a **standard analogue phone** - you can also use as an IP phone in combination with a simple converter
- **IP phone** - a modern phone with many useful functions that is used independently from a computer
- a **software phone** - a software application that enables phone calls directly from a PC using a microphone and speakers (handset)
