vpn:LINK

Telecommunication services for your business

- **safe and cost-effective solution**
- **access to company network from anywhere**
- **connection between branch offices via phone or video conferences**

With a virtual private network, you get the all-in-one solution!

Each organisation having a regional or international network of branch offices will surely appreciate, if the internal communication works as if in one central building. Imagine, that employees being several hundreds or thousands of kilometres away can communicate among each other and share data as easy as if they were sitting in adjacent offices. Does it seem impossible to you? This is exactly why we would like to introduce our service "Virtual Private Network" – **vpn:LINK** to you.

vpn:LINK from Slovanet is a modern, price-effective, secure and efficient technology of connecting branch offices by a computer network by means of a multi-service network (MPLS) provided by Slovanet or over the Internet.

vpn:LINK enables easier data updates between branch offices and headquarters, secure sharing of sources (servers, data storage systems, information systems, etc.) within a company, distribution of information for your business partners and it reduces your costs of telecommunication services at the same time.

What will you gain thanks to vpn:LINK from Slovanet?

- interconnection of branch offices and computers into one central network with emphasis on security

- easy access to company Intranet network from any place

- sharing computer applications, programmes and sources (company databases, business and economic systems, application servers, data storage systems)

- possibility of secure Internet access via one centralized spot in the network, be it in the branch offices of your company or Slovanet data centre (CRP)

- possibility of cost-effective telephonic and video conference connection between branch offices

- continuous overview of the economic situation of the company thanks to easy access to your information system from any place

- increase of service quality thanks to immediate accessibility of client data

- easy access of employees to company data while they are on business trips or from their home computer

Telecommunication services for your business

Technical solution:

There is not much you need to create a **vpn:LINK**. Each branch office should dispose of at least one computer, which can be connected by an optical, metallic, wireless, ADSL, ISDN or mobile connection. However, the actual technical solution is tailored by us with regard to your needs, whereas we consider both technological requirements and minimum costs.

Slovanet is the company with a long-term focus on providing communication solutions of **vpn:LINK** type, it disposes of rich experience in realizing smaller as well as larger projects. Not only we use reliable Cisco appliances, we also have experien- ced professionals providing both quick solutions and complex expert advice.
