TELECOMMUNICATION SERVICES FOR YOUR BUSINESS

- ✓ video conference calls in FullHD quality on computers and mobile devices
- ✓ share screen and files during a video conferencing calls
- ✓ record, archive and export video conferencing calls

Save time and costs with efficient video conferencing

Your employees no longer have to travel for conferences and are free to use the time and cost savings in more effective ways. The **video:LINK** communication system is the perfect aid for your business when working from home, handling negotiations with business partners, operational communication between branches and regular team meetings involving individuals at different sites.

What does video:LINK provide?

- **video:LINK** is a high performance cloud communication and video conferencing solution, that can be used on computer, laptop, smartphone and tablet applications or special equipment installed directly in your video conferencing room or space
- **video:LINK** accommodates an unlimited number of user accounts and can connect up to five devices to a single account. The service also features a user-friendly interface for inviting new parties into a video conference call and easily transitions from a simple call between two parties simply to a group call by adding a new contact
- the core of the **video:LINK** solution is complex reliable communication platform **Microsoft Teams**, which covers all forms of modern communication and collaboration. It provides your employees with shared space, in which they can chat, call, attend meetings, share files and cooperate on document creation
- **video:LINK** can broadcast and receive live video conferencing calls and record video in HD Quality from anywhere in the world; on top of that it can also record and archive your meetings

- **video:LINK** is a cost-effective video conferencing solution that can be deployed on anywhere from just a few users to much larger groups, meaning you only have to purchase what you currently need and later can easily expand the number of users or devices as the needs of your growing company change
