

backup:LINK

TELECOMMUNICATION SERVICES FOR YOUR BUSINESS

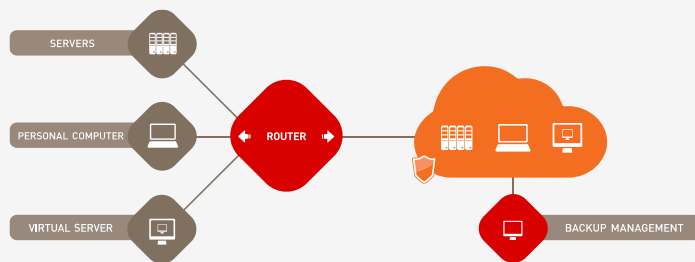

- ✓ platform independent cloud solutions
- ✓ secure, flexible and automated
- ✓ pay-as-you-grow platform

More than just a backup for your data

The **backup:LINK** solution, developed in partnership with Acronis is ideal for backing up and restoring data for small and medium enterprises and for corporations. It combines high performance, quality and reliability with new functions.

backup:LINK is the perfect solution for companies and institutions in any areas of operation with no up-front costs. It protects entire systems, even if you aren't an IT expert. In the unlikely event of a failure or catastrophe, **backup:LINK** facilitates quick and painless restoration of individual files, application data or entire systems - all from a single backup. You can have your data back in a matter of minutes.

The Acronis AnyData Engine, built on advanced technologies, makes it easier to use than ever before. Innovative data protection technologies, combined with patented disc image technology and a simple-to-use interface ensures that your data, ranging from emails to entire operating systems, are backed up and restored in just a few clicks.

Data protection – key features

- **Simplicity** – automated deployment and management with centralised administration using a web interface.
- **Comprehensiveness** – support for workstations and physical or virtual servers.
- **Security** – provides SSL encryption for management and AES-256 encryption for backing up data.

Advantages

- cost savings and cost optimisation
- flexibility and compatibility
- simple implementation
- unified backup management using a single interface
- scalability with linear costs

Backup support

- backup entire systems and restore on new hardware
- backup and restore only select files and folders or entire systems
- local and cloud-based backups provide hybrid data protection
- physical system backups for Windows and Linux servers and Windows, Mac and Linux desktops and laptops
- backup for smartphones and tablets running Android and iOS
- supports Microsoft SQL, Microsoft Exchange, Active Directory and Office 365
- server backups compatible with VMware, Hyper-V, RHEV, Linux KVM, Citrix XenServer, Oracle VM Server, Virtuozzo VMS and containers
