

- ✓ easy fax message sending by e-mail
- ✓ no fax device, toner or paper
- ✓ no fax connection necessary, no phone line blocking

Sending a fax as efficiently as e-mail

You can now send and receive fax messages elegantly and comfortably. The **fax:LINK** service enables you to send fax messages easily via the Internet. You save costs for a fax device and its operation, and you don't need any fax connection. You will appreciate the fax:LINK service while travelling if you need important documents or contracts to be delivered, orders approved, etc. You can work with the fax message as with an e-mail, you can forward, print or edit it.

How the service works

- The **fax:LINK** works as easy as sending and receiving e-mails.
- When sending a fax, you will send a standard e-mail to the recipient (text with/without attachments). A special e-mail server will convert the e-mail into a fax message which is then delivered to the recipient's fax device.
- If a sender sends a fax to you, the message will be delivered to your mail box as an e-mail with an attached .pdf file. In a company frequently using fax services each employee can have its own fax number.

Options and advantages

- easy setup
- zero initial costs, minimum operation costs
- time saving when sending or receiving fax messages
- affordable, efficient and easy solution
- independent from geographic location, mobility
- fast document processing, no printing, easy message archiving
- the possibility to send bulk fax messages
- working with a fax message similar to working with an e-mail - printing, forwarding, editing, notes
- free webcare service - complete information about fax connections
- environmental protection
